

# Case Study

Bifrangi

## The Customer

Bifrangi are a manufacture of components for the agricultural, off-highway, marine, power generation and mining sectors. They are world leaders in closed die forging and finished machining of large crankshafts.

## The Challenge

The client had pre-existing gates which where old and rusting, diminishing the reliability and robustness of the perimeter security. This means any prospective personal wanting to enter the property unauthorised would be able to gain access to the premises easily.

## The Solution

In pursuit of a cost effective and a reliable security solution Bifrangi contacted Gateway Automation, a trusted perimeter security solution. After identifying the problem and carrying out a site survey, Gateway Automation advised that Bifrangi have a 7.5m sliding gate, a 7.5m barrier and a turnstile, accompanied by a range of Paxton and Telguard access controls.

## The Benefits

- Improves site security, even when there are no employees on site, whilst maintaining the flow of authorised traffic for authorised vehicles.
- Easily integrated with any access controls, whether they are pre -existing, newly installed or fitted retrospectively. For example,
