

Case Study

Maritime Transport

The Customer

Maritime transport is one of the UK's leading providers of integrated road & rail freight logistics, delivering a range of different services such as, container transport & storage, domestic distribution, freight management & truck sales. Currently Maritime transport employs more than 3000 personnel across it's 41 sites.

The Challenge

Maritime where aiming to provide a safe environment in all areas on their site. For this location in particular, the aim was to manage the safety process of loading and unloading freight trains, through controlling the environment. Currently there are no safety measures in place to carry out the goal of a safe environment out.

The Solution

To combat this issue, Maritime Transport contact Gateway Automation, a trusted perimeter security provider with the hope they could provide a solution. After an expert survey of the site and discussions with both parties, Gateway Automation advised that two automatic sliding gates would be the perfect option.

The Benefits

- 5s per metre opening time which will allow for a quick & efficient opening & closing of the gate when required.
- A Plug & Play feature enables a quick & hassle-free installation provided by Gateway Automation, to prevent unnecessary delays at the premises.
- Improves site security & safety with the CAT 3 safety edges, dual height photocells & emergency stop button.

Customer Comments

'Superb service from Gateway Automation who always offer the most cost-effective solution to any problem, their after-care service is also second to none'
